FiltR Fence™

Temporary and Reusable Solutions
For Erosion Management Needs!

Simple 2 Minute Assembly - Typical Application

FiltR Fence™ Reusable Inlet Protection

FiltR Fence™ Advantages

- Strong, light weight, portable
- Quick and easy assembly
- Proven, reliable performance
- Reusable and easy to clean
- Added jobsite safety
- Full 2 Year Warranty

The FiltR Fence™ is a REUSABLE inlet protector that keeps out silt and sediment throughout the entire construction project. The heavy-duty frame forms a sturdy barricade around nearly any size inlet. The frame members are secured to each other using steel pins, which double as ground stakes to secure the assembly to the ground. A geotextile sleeve is then placed around the perimeter to form a barrier for silt, sediment and debris. The simple 2 minute assembly significantly reduces labor costs.

In addition, the optional cover offers built-in safety by guarding against the many unsafe conditions found on most job sites. Once construction is complete, the 6" knockdown design makes this reusable unit easily transported to the next construction site. All of these features and benefits combine to make the FiltR Fence the contractor's choice for all their temporary erosion management needs.

For more information about Temporary Inlet Protection, call your ACF Environmental or Plastic Solutions distributor.
