Cobble-Stone

Imparting classic, European elegance to paved areas with its old world design, Cobble-Stone offers unique design possibilities. With rounded edges, the natural stone look is available in rectangular and square pave stones. Cobble-Stone can be used in various combinations for an array of exciting pattern designs.

APPLICATIONS

Urban Street Paving • Entrance Areas • Porte-Cocheres • Crosswalks
Esplanades • Light Duty Parking Lots • Residential Driveways
Patios • Walkways • Pedestrian Malls • Medians Terraces • Pool
Decks • Sidewalks • Garden Paths • Roof Gardens

COMPOSITION AND MANUFACTURE

Cobble-Stone is made from a "no slump" concrete mix. Made under extreme pressure and high frequency vibrations, Cobble-Stone has an average compressive strength greater than 8000psi, a water absorption maximum of 5% and will meet or exceed ASTM C-936 and freeze-thaw testing per section 8 of ASTM C-67.

INSTALLATION

1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area which has been cleared. Backfill and level with dense graded aggregate suitable for base material (typically 4-6 in. of compacted base for light vehicular and pedestrian traffic) or as otherwise directed by Site Engineer/Architect/Landscape Architect.
2. Place bedding course of washed sand conforming to the grading requirements of ASTM C-33 to a maximum uniform depth of 1-1 1/2 in. (25-38mm) screeded to the grade and profile required.
3. Install Cobble-Stone with joints approximately 1/8 in. (3mm).
4. Where required, cut pavers with an approved cutting device to fit accurately, neatly and without damaged edges.
5. Tamp pavers with a plate compactor, uniformly level, true to grade and free of movement.
6. Spread sand to 1/8 in. (3 mm) thickness over entire paving area.
7. Make one more pass with plate compactor to fill joints with sand.

Complete installation & specification details are available by contacting your Pavestone Sales Representative.

Note: Colors are shown as accurately as possible in brochures & samples, but due to the nature of the product, regional color differences and variables in print reproduction, colors may not match exactly. For best results in maintaining color consistency, pavers must be installed from several cubes at a time. Efflorescence, a whitish, powder-like deposit, may appear on concrete pavers. This is a natural occurrence in any concrete product and will usually wear off over time.
