

DEPENDABILITY ADAPTABILITY
RELIABILITY DURABILITY

As a leading manufacturer of enclosures and illuminated street name, blank out and lane control signs in the U.S., Southern Manufacturing has a history of quality and reliability that dates back to 1938.

Utilizing a clear vision for traffic safety, Southern Manufacturing is dedicated to improving technology and fabrication. At the same time we are keeping the highest standards of quality, reliability and low cost of operation for our customers. Southern's depth of engineering and manufacturing turn today's challenges into tomorrow's realities

Illuminated Street Name

Southern Manufacturing, with an installed base of over 10,000 signs nationwide, is proud to be recognized as the leading manufacturer of internally illuminated street name signs. Southern's unwavering dedication to continuous improvements in design and technology has led to the creation of products that excel in ease of maintenance, durability, and customer responsive design.

Because lenses, light engines, and power supplies can normally be replaced without sign removal, Southern's signs are easy to maintain. Southern's signs are also durable. Designed to meet the most rigid hurricane standards, all Southern Manufacturing signs are UL listed, a standard that reflects our long-standing commitment to providing consistent high quality products. Illuminated street name signs also carry a six year limited warranty, are available in both LED and fluorescent configurations, and can be installed as either free swinging signs or rigid mounted. They are available in 4 foot, 6 foot and 8 foot lengths and either single faced or double faced styles.

In response to communities' demand for customized signs, Southern's advanced sign CAD systems can produce the most demanding logos, and Southern's powder coated housings can be painted to complement the streetscape of any city. Southern's illuminated street name signs are constructed of the highest quality materials from the 5052 H32 .125" gauge aluminum bodies to the Lexan, electrical components, and 3M highway films. The sign bodies are continuously welded for superior strength and weather protection.
