

AeroFlex Backplates

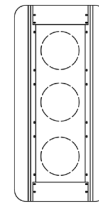

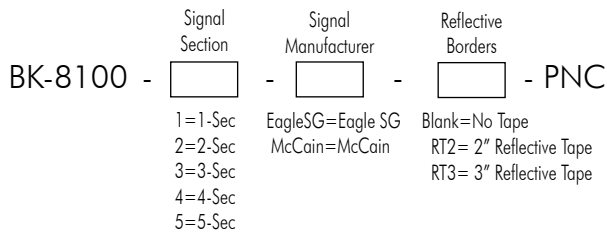

Pelco's innovative flexible backplate design reduces stress to the backplate, signal, signal mount, and mounting structure at elevated wind speeds. AeroFlex Backplates are fabricated from black dual durometer thermoplastics that combine rigidity and flexibility. The universal design will fit most current signal manufactures, while signal specify backplates are available upon request. Reflective borders also available.

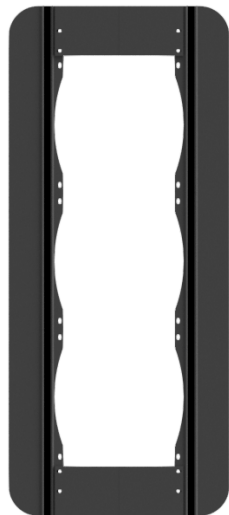

BACKPLATES

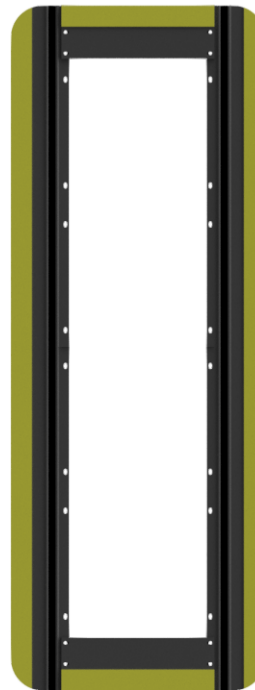

AeroFlex Signal Specific Straight Backplates, Dual Durometer PVC

Note: Designed to fit specific signal manufacturers.

BK-8100-3-EagleSG-PNC
12", 3-Section Eagle SG
EXAMPLE

BK-8100-4-McCain-RT2-PNC
12", 4-Section McCain
w/ 2" Reflective Tape
EXAMPLE

Note:
