Triangular Silt Dike

**The superior solution to straw bale barrier,
silt fence and rock check dams**

10" Triangular Silt Dike

The original 10" Triangular Silt Dike™ barrier consists of urethane foam and geotextile fabric. Designed with protective aprons on both sides of the barrier, there is only one sewn seam (on the front upstream side) which allows the barrier to be configured in several different applications. The materials and the design make this device lightweight, easy and fast to install, and more effective than other sediment control products.

Applications

- Ditch check dams
- Diversion Dikes
- Drop Inlet Protection
- Temporary Ditch Liner
- Stream & Pond Protection

8" Triangular Silt Dike

The 8" Triangular Silt Dike™ barrier is designed smaller for development areas where vehicle traffic is greater. It also has protective aprons on both sides and has the front and back apron sewn into the barrier. With both aprons sewn, it allows this product to be easily installed on concrete and asphalt.

Applications

- Curb Protection
- Continuous Barrier
- Diversion Dikes
- Drop Inlet Protection
- Stream & Pond Protection
- Installations on Concrete and Asphalt

Installation Details (</silt-dike-installation-details.html>)

The better solution to wire back silt fence, rock bags, sand bags and straw wattles!

(/uploads/3/4/1/7/34179519/9699653_orig.jpg)

The better solution to silt fence, sand bags, and straw wattles!

5" Triangular Silt Dike

The 5" Triangular Silt Dike™ barrier was designed for smaller flatter runoff areas. It has a protective apron on the front or upstream side of the barrier. With no protective apron on the backside or downstream side, this should be installed along curbs or on hard surfaces where overtopping the barrier will not cause erosion on the backside.

Applications

- Along Curbs in Developments
- Diversion Dikes
- Inlet Protection
- Continuous Barrier
- Small Surface Drainage Areas
- Roadway Shoulder Protection
- Installations on Concrete and Asphalt
