F.L.E.A.T. - MT® (Flared Energy Absorbing Median Terminal)

A Road Systems Product

Pictures:

Description:

The FLEAT-MT is a Median Terminal for use in wide (12' minimum) medians. The components of the original roadside FLEAT are combined with a couple of small additional components to create the FLEAT-MT. See link below for a drawing.

The front single-sided section of the FLEAT-MT is similar to the roadside [FLEAT](#) and functions the same. Depending on the severity of the impact, the vehicle may be stopped before reaching the second impact head at post #4. If the end-on impact is severe enough, the vehicle will activate the second impact head. This impact head will then begin to slide down the rail sequentially kinking the backside rail.

Benefits and Features :

- Attaches directly to median double-sided w-beam rail.
- Fast and easy installation and repair
- 37' 6" long for Test Level 3 design speed
- Can be used with wood or steel breakaway posts
- Interchangeable components with flared roadside [FLEAT](#) terminal
- Interchangeable components with tangent roadside [SKT](#) terminal
- This economical terminal will lower the cost of median terminals
